

Maths of the week

sharing

Using the language: halving/doubling/between/equal.

How do we share? How is it fair?

"It's fair to share"

Try practising this at home : If you had 10 sweets and you had to share them between 2 people ,how many will they get each ?If another friend joins in would they get equal amounts? What is the best strategy?

Also remember to keep practising counting, ordering, recognising and writing numbers to 20 and beyond.
